

Renovation of an old movie theatre in ATHENS

January 2005

We have the pleasure of informing you about a very special reference for the "Akustik+Sylomer®". The order came through the sales partner from Greece ERGOAKUSTIKI Ltd

This project is part of the total renovation of an old movie theatre called "ANESIS" (which means comfort!) located at Kifisias Street, Ampelokipi area in the city of Athens. The building is going to be transformed to a multi-purpose entertainment center, including a theatre hall, which is used mainly for plays and partly for musical performances. Above this theatre hall there is another open movie theatre (on the roof actually), which of course is used during the summer. So, the false ceiling in between the two halls, in combination to a floating floor area beneath the sound system of the open theatre, has a main objective the isolation of the closed theatre hall when there is disturbance above.

It is a running project and the installation of AMC elements went on during November 2004. The isolation of the false ceiling according to the loading of the elements is estimated around 9-9.5 Hz (according to the natural frequency curve for Akustik+Sylomer 75 for loads of ~70-72Kg).
